

Keyanna Takita
Timing table
CS372
Assignment 01

Over the process of testing both the recursive and iterative algorithms, both showed an increase in running time as the number of disks increased. However, the recursive algorithm performed faster overall during testing.

```
[keyannatakita@Keyannas-MacBook-Pro ~ % cd ~/Documents/CS372Lab.KeyannaTakita/apps/Assignment01
[keyannatakita@Keyannas-MacBook-Pro Assignment01 % g++ -std=c++17 hanoi.cpp -o hanoi
[keyannatakita@Keyannas-MacBook-Pro Assignment01 % ./hanoi
Recursive Hanoi with 5 disks took 0 milliseconds
Recursive Hanoi with 10 disks took 0 milliseconds
Recursive Hanoi with 15 disks took 0 milliseconds
Recursive Hanoi with 20 disks took 11 milliseconds
Recursive Hanoi with 25 disks took 153 milliseconds
Recursive Hanoi with 30 disks took 3893 milliseconds
Recursive Hanoi with 35 disks took 125177 milliseconds
```

```
keyannatakita@Keyannas-MacBook-Pro Assignment01 % g++ -std=c++17 hanoiit.cpp -o hanoiit
./hanoiit
Iterative Hanoi with 5 disks took 0 milliseconds
Iterative Hanoi with 10 disks took 0 milliseconds
Iterative Hanoi with 15 disks took 4 milliseconds
Iterative Hanoi with 20 disks took 123 milliseconds
Iterative Hanoi with 25 disks took 3626 milliseconds
Iterative Hanoi with 30 disks took 115583 milliseconds
█
```
